

Home NRG Saver Inc Geo Thermal Grant Requirements

In Order to apply for the ecoENERGY Ground or Water Source Heating System Grant the following steps must be taken by the home owner **BEFORE** the post retrofit evaluation can be performed and application made:

1. The home owner must submit a copy of the GeoExchange System Certification Application form to the GeoExchange Coalition.
 - This form is to be provided by the installing contractor.
 - There is a \$125.00 fee that must be sent to the GeoExchange Coalition with this application.
 - A sample of this form can be viewed on our web site

2. The GeoExchange Coalition will then review the design forms and upon approval, a GeoExchange System Certificate will be sent to the home owner.
 - A sample of this form can be viewed on our web site.
 - Once the home owner has received this certificate, and the home owner is certain that no other grant qualifying energy improvements will be made, the post retrofit evaluation can be scheduled.
 - The Home NRG Savers Inc Energy Advisor will require a copy of the System Application Form as well as the Certificate number provided on your System Certificate.

We would suggest that you ask your installing contractor for 3 copies of the application form.

- One to send to the GeoExchange Coalition
- One for the Energy Advisor
- One for your records

The GeoExchange Coalition can take a lengthy time to review your application so we suggest that the application be made as soon as your system has been installed.
